

Application No. 10/697,303

IN THE SPECIFICATION:

Please enter the attached substitute specification for that originally with this application.

IN THE ABSTRACT:

Please enter the attached substitute Abstract of the Disclosure for that originally filed with this application.

ABSTRACT OF THE DISCLOSURE

The invention discloses a biosensor monitor with a housing to accommodate a printed circuit board for data analysis from the electrochemical reaction on the test strip, a lancing device for blood inoculation which requires only one finger to activate the release of a lancet. This new monitor includes a biosensor monitor and the lancing device to make it more compact in size.
